

AquaVerify

Observe water. Understand your surroundings.

Help document freshwater environments through simple, guided observations.

Guided 4-Step Workflow

Step-by-step visual questions designed for students and community members.

Educational Explanations

Clear "Why we ask this" guidance on clarity, odour, flow, and vegetation.

What is Citizen Science?

Citizen science invites community members and students to contribute to environmental monitoring. By recording visual indicators like clarity, colour, and vegetation, you help build baseline knowledge of local waterways.

Observations are visual estimates, not certified laboratory tests.

Sample Demonstrations

Willow Creek Bridge

Observation Title (Optional)

Morning Stream Survey

Observation Date & Time (Auto-generated)

Monday, Sep 28, 2026 • 11:09 AM

Location model is structured for direct GPS integration in future releases.

→ Next Step

Water Appearance

Observe visual clarity, colour, and odour from a safe position on the bank.

How clear does the water look?

Why we ask this (Clarity)

Cloudy water can contain suspended particles. This observation is a visual estimate, not a laboratory turbidity measurement.

Clear

Slightly cloudy

Very cloudy

Unsure / Cannot tell

What colour does the water appear to be?

Why we ask this (Colour)

Natural water colour comes from organic tannins, soil minerals, or algae. Unusual or milky colours can point to recent runoff.

Normal / Natural-looking

Greenish

Previous

→ Next Step

Environmental Factors

Record surface flow, litter presence, vegetation, and surrounding land use.

How is the water moving?

Why we ask this (Water Movement)

Water velocity influences aeration and oxygen availability. Fast riffles oxygenate water for fish and benthic macroinvertebrates.

Still

Light movement

Fast movement

Unsure / Cannot tell

How much visible litter or trash do you notice?

Why we ask this (Litter)

Visible debris harms aquatic habitats, degrades banks, and introduces microplastics. Documenting trash helps local cleanup efforts.

None noticed

Small amount

Previous

→ Next Step

Field Notes & Summary

Add any extra field observations, wildlife sightings, or unusual conditions.

Additional Field Notes (Optional)

Clear shallow water flowing gently over pebble bed. Observed local minnows and healthy riparian grasses along the bank. No trash or odor detected.

Photo & GPS Attachment

Photo capture and GPS metadata tagging are designed for future releases.

Observation Disclaimer

These records represent citizen observations and are not certified laboratory measurements. They should not be used alone to determine water safety or ecosystem health.
